"Here is bread which strengthens men's hearts and therefore is called 'The Staff of Life.'"

GENERAL DIRECTIONS FOR MAKING BREAD.

Good flour, good yeast, pure water and sweet milk are the first essentials to the making of "Good Bread." Flour should always be sifted before measuring, and if kept in a cool pantry, it should be warmed before using. Milk and water should also be warm. It has been the general custom to mix bread at night, but the best bread makers now agree that it is better to raise it more quickly. the sweet, natural flavor and strength of the flour is retained if the dough rises quickly, and never more than until double its bulk. Kneading is necessary when water bread is made, but not for milk bread if all the ingredients are mixed thoroughly and it is cut down often with a knife. One of the important steps. and one often overlooked, is that the dough be well covered in all its stages until it is put into the oven. A crust is not desirable until the loaf is in the baking pan. Be very careful about using any flour beyond a dusting of the board when shaping into loaves for often the failure to have good bread is caused by the careless use of a cup of flour which was needlessly worked into the doughat this stage, causing the loaf to rise unevenly in the oven and bulge at the side. Butter the top of the loaf when taken from the oven.

HOP YEAST.

"My nature is subdued to what it works in."—Shakespeare.

3 potatoes 1 tablespoonful of salt 8 or 10 hops 2/3 cupful of sugar 1 quart boiling water

Put hops and salt into a bowl and pour over them the boiling water. Peel and grate the potatoes, strain the liquid over them and add sugar. Set on the stove a few minutes to thicken. When milk is warm, stir in one cupful of good yeast, cover and put in a warm place to rise.

Mrs. Smith.

WHITE BREAD.

11 cupfuls Ceresota flour 2 tablespoonfuls sugar
2 tablespoonfuls lard 1 tablespoonful salt

of sugar
Flour for a stiff dough

Add the white of the egg (beaten stiff) the last thing. Knead it long and vigorously. Let it rise in a warm place until light, then knead it down in the bowl. Take out pieces as large as an egg, roll first in a ball, then into long strips about nine inches long and three-fourths of an inch thick. Place them quite a distance apart on the baking tin as they must not touch while rising or baking. Let them rise and bake slowly. They should be nearly all crust and if they dry thoroughly before they are baked they will be crisp and brittle.

A Receipt for Cooking Husbands

So as to make them tender and good.

A good many husbands are spoiled by mismanagement. Some women go about as if their husbands were bladders and blow them up. Others keep them constantly in hot water, others let them freeze by their earelessness and indifference. Some keep them in a stew by irritating ways and words; others roast them. Some keep them in a pickle all their lives. It eannot be supposed that any husband will be tender and good managed in this way, but they are really delicious when properly treated. In selecting your husband, you should not be guided by the silvery appearance as in buying mackerel, nor by the golden tint as if you wanted salmon. Be sure to select for vourself, as tastes differ. Do not go to market for him, as the best are always brought to your door. It is far better to have none, unless you will patiently learn how to cook for him. A preserving kettle of the finest porcelain is best, but if you have nothing but an earthenware nappy, it will do with eare. See that the linen in which you wrap him is nicely washed and mended with the required number of buttons and strings nicely sewed on. Tie him in the kettle by a strong silk cord called comfort, as the one called duty is apt to be weak. They are apt to fly out of the kettle, and be burned and crusty on the edges, since like crabs and lobsters, you have to cook themalive. Make a steady fire out of love, neatness and cheerfulness. Keep him as near this as seems to agree with If he sputters and fizzes do not be anxious, some husbands do this until they are quite done. Add a little sugar in the form of what confectioners call kisses, but no pepper or vinegar on any account. A little spice improves them, but it must be used with indgement. Do not stick any sharp instrument into him to see if he is becoming tender. Stir him gently, watch the while lest he lie to flat and close to the kettle, and so become useless. You cannot fail of knowing when he is done. If thus treated you will find him very digestible, agreeing nicely with you and the children, and he will keep as long as you want, unless you become eareless and set him in too cool a place.

Montpelier Crackers

Have always borne the reputation of being

The Best in the World. Why?

BECAUSE-The old firm of C. H. Cross and C. H. Cross & Son have made them for 60 years.

BECAUSE-The same workmen have baked them in the factory for 30 years.

THEN AGAIN—The best of all is, they are baked in ovens with soap-stone bottoms, which keeps them moist, crisp and tender a great while longer than if baked in ovens with iron bottoms. As good crackers cannot be baked on iron as on soapstone. Be sure to call for MONTPELIER CRACKERS, and you get the finest that are made.

AN INVITATION

Scarcely a day passes without a customer saying in our store "I had no idea you sold these things." Neither is it an unusual thing for purchasers to express surprise at finding in our stock articles quite unlike anything they have seen before, and which are not obtainable elsewhere. These and other instances prove that a better acquaintance with our store would frequently save our customars time and money. It is difficult to induce visitors merely to look, as so many people hesitate to enter a store unless actually wanting something. While this is a natural thing to do, it is a mistaken consideration toward an establishment like ours, which is always filled with novelties. In this announcement, therefore, we are pressing our invitation to call as many times as convenient. Inspection can be made leisurely without your being importuned to buy. Every successive visit will discover something not seen before.
